Technical Skills

- **CAD and Drafting:** SolidWorks, Fusion 360, AutoCAD, Autodesk Inventor, Autodesk Revit, GD&T
- **Manufacturing:** CNC Machining, Manual Mill & Lathe, Laser Cutting, 3D Printing, Sheet Metal, Soldering, Metrology
- **Software:** C, C++, Python, Rust, Git, PID, Monte Carlo Localization, Odometry, Sensor Fusion

Experience

Controls Member and Machinist – Waterloo Rocketry – Waterloo, ON July 2026 – Present
- Designing a gimbal mount subassembly in SolidWorks for an active thrust vector control (TVC) system
- Machined rocket engine and structural components on manual mills, lathes, and CNC machines to ±0.005” tolerances

Metal Fabrication Intern – Genomic Precision Fabricators Ltd. – Brampton, ON June – Sept 2026
- Cut, prepped, and deburred metal stock using band saws, cold saws and angle grinders, processing 30–50 parts per shift
- Operated drill presses, hydraulic shears, and shop presses under supervision to fabricate sheet metal to specifications
- Inspected fabricated parts using calipers and micrometers; prepared and loaded components for CMM testing
- Organized workstation using 5S and Lean principles, maintaining an incident-free safety record over 4 months

Librarian – Brampton Library, Four Corners Branch – Brampton, ON Jan 2023 – Aug 2026
- Shelved materials and pulled holds; shelf-read the **60,000-item catalog** on a recurring two-month cycle
- Delivered 600+ hours of STEM programs (science experiments, coding lessons, robotics challenges) for youth aged 6–12

Volunteer Bike Technician – Different Spokes Bike Hub – Brampton, ON June 2023 – June 2026
- Performed **200 hours** of free bicycle repair and maintenance for members of the community

President – Heart Lake DECA – Brampton, ON Sept 2022 – June 2026
- Led a 120-member DECA team, coordinating club logistics and coaching competitors for the business case competition
- Personally **earned 20 total awards** for Personal Finance; International Finalist (2026); 2x Provincial Champion (2025, 2026)

Projects

President and Engineering Lead, Hurricane Robotics – VEX Robotics Team Sept 2022 – June 2026
- Restarted an abandoned robotics club into a 30-student team, securing $6,000 in funding through sponsorship and outreach
- Led the design, build, and iteration of 6 competition robots; ranked **Top 200 of 20,000+ teams globally**
- Designed robot assemblies in Fusion 360 and Inventor under strict size and resource constraints; won 2 Innovate Awards
- Reduced the 2026 season’s robot weight from 25 lb to <15 lb through simplifying geometries and various material changes
- Manufactured structural components and assembly jigs using 3D printing, CNC routing, laser cutting, and hand tools
- Programmed a Monte Carlo Localization system fusing encoder, IMU, and distance-sensor data, along with a custom current-sensing algorithm, in Rust, improving autonomous run consistency from 70% to 98%; won Robot Skills Champion

Whipper Trebuchet Sept – Nov 2025
- Modelled the full trebuchet system in Fusion 360, optimizing for weight, launch distance, and accuracy
- Implemented motion-tracking software to analyze, iteratively tune and synchronize counterweight, arm, and sling release timing, **launching a projectile 78 m** with a 40 lb counterweight (up to 60 lb capacity)
- Improved energy transfer efficiency from 60.2% to 67.8% by adding wheels to sync counterweight and arm stall points
- Laser cut aluminum brackets and CNC-routed throwing arm, designing parts for manufacturing and assembly
- Engineered a custom pin-and-washer release mechanism to safely fire projectiles exceeding 120 km/h

Education

University of Waterloo - BASc, Mechatronics Engineering | $17,000 in scholarships Sept 2026 – Apr 2031
